### BRIDGE RELIEF MOULD TYPE 2

**decocrete** Bridge Number Marker Moulds are designed to give our customers a product that offers “On site ease of use” while at the same time ensuring a bold and defined end result.

The mould is made out of a high strength 60 shore hardness foam and with an adhesive backing for mounting onto form-work and is suitable for multiple use.

Conforming to all South African standards for such structures, **resocrete** are able to offer this customised mould with a quick turn around time.

#### **Installation**

The flat surface of the relief mould must be attached to the inside surface of the form-work shutter using the adhesive backing on the back of the mould. In the event of this bond not being sufficient, we advise fixing in place with three chip board screws along the top and three along the bottom of the mould.
