BRIDGE NUMBER MARKER

Moulding the Future

NUMBER PLATE TYPE 1

Servicing the whole of the South African market, **decocrete** Bridge Number Plates are manufactured from high strength Polymer Concrete (Polycrete) and conform to all specifications of SANRAL TD-S-N-005-v1.

All Number Plates including lettering and numerals are Solid cast as one piece thus obviating any chance of letters or numbers coming loose and greatly reducing vandalism.

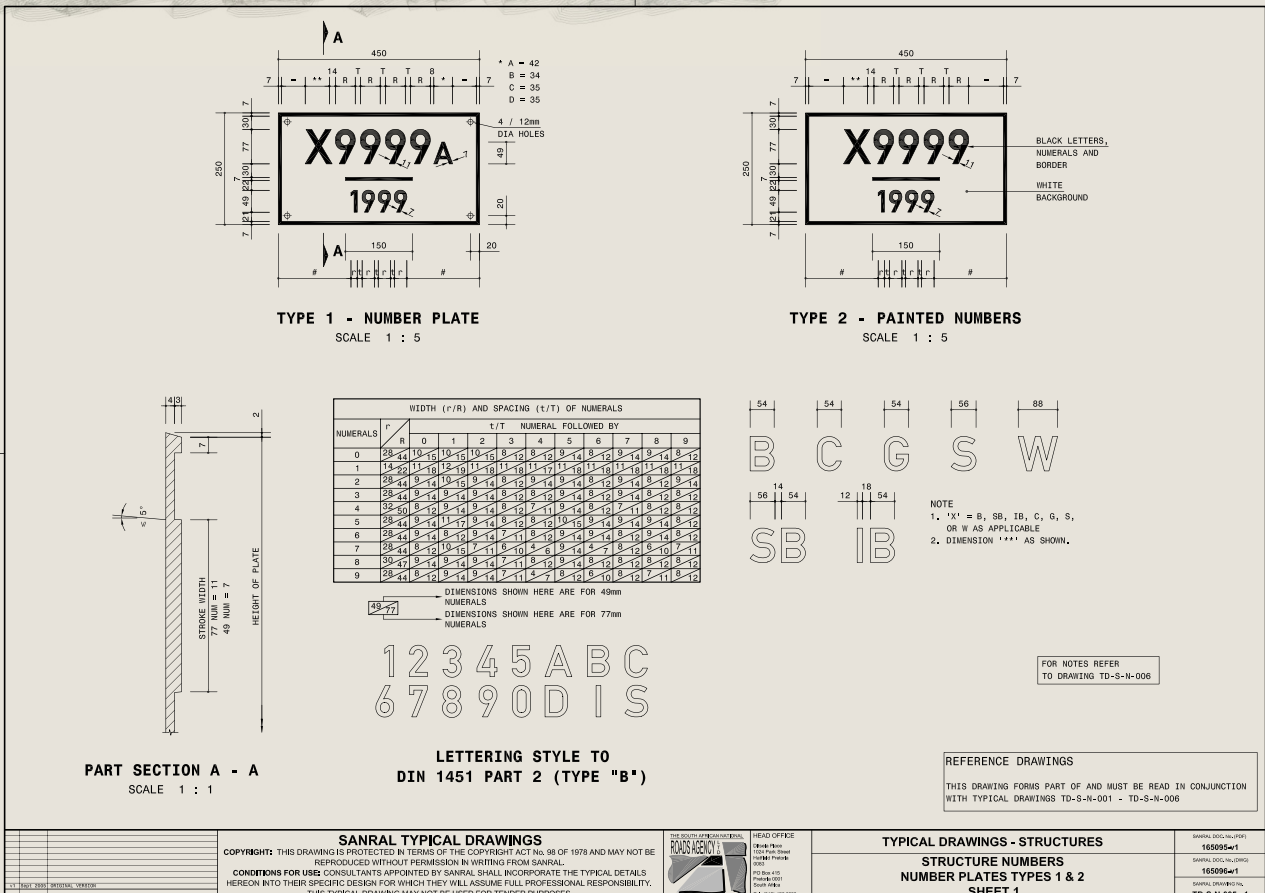

As a non-ferrous metal and with no steel components to rust or corrode, the plates also have no scrap value, thereby minimizing theft or vandalism, and with our in-house design team, **resocrete** guarantees quick turn-around on orders.

Installation

Bridge plates can be installed using 3 different methods:

- The Bridge Plate is attached to the timber formwork of the structure using the holes provided and then the concrete cast around it, thus holding it in place;
- The Bridge Plate is fixed into place using M10 x 40 stainless steel sleeve anchors;
- The Bridge Plate is fixed in place using high strength Structural Polyurethane
